

Disclosure of Fuel Resource Mix for Electricity Services Provided by NextEra Energy Services Delaware, LLC

The following environmental information is for electricity supplied through NextEra Energy Services Delaware, LLC from April 1, 2021 through March 31, 2022.

Power Plants can generate electricity from a number of different fuel sources, resulting in different emissions. NextEra Energy Services Delaware, LLC reports fuel sources and emissions data to customers, allowing customers to compare data among the companies providing electricity service in Delaware. The standardized environmental data below reflects the regional averages of most power plants in the Mid-Atlantic region and incorporates NextEra Energy Services Delaware, LLC renewable portfolio standard requirements.

Energy Source (Fuel Mix)		
<p>The values shown represent April 2021 – Mar. 2022 average fuel mix for the Mid-Atlantic Region (PJM)</p>		
	Coal	21.08%
	Gas	38.49%
	Nuclear	32.98%
	Oil	0.19%
	Other	0.03%
	Renewable Energy:	
	Captured methane gas	0.25%
	Geothermal	0.00%
	Hydroelectric	1.21%
	Solar	0.96%
	Solid waste	0.50%
	Wind	3.48%
	Wood or other biomass	0.18%
<p>Renewable energy sources subtotal: 6.39%</p>	TOTAL*	100.00%
 Air Emissions		
<p>The amount of air pollution associated with the generation of the electricity of production for this region is shown in the table at the right.</p>	<p>Pounds Emitted per Megawatt Hour of Electricity Generated:</p>	
	Sulfur Dioxide (SO ₂)	0.4818
	Nitrogen Oxides (NO ₂)	0.3719
	Carbon Dioxide (CO ₂)	838.16
<p>*CO₂ is a "greenhouse gas", which may contribute to global climate change. SO₂ and NO_x release into the atmosphere react to form acid rain. NO_x also react to form ground level ozone, and unhealthy component of "smog".</p>		

*Totals may not equal sum of components due to independent rounding.
