|                                                                                                                                                    | Notes            | <p>1. All electricity generated within the ISO New England (ISO-NE) control area and fed on to the New England grid, as well as electricity exchanged between ISO-NE and adjacent control areas, is tracked via the New England Power Pool (NEPOOL) Generation Information System (GIS). For each megawatt hour (MWh) of electricity generated within or exchanged between the ISO-NE control area, whether renewable or not, one serial-numbered, electronic GIS certificate is created. The GIS certificate represents all attributes or characteristics, such as fuel source, air emissions, location, etc. of that one MWh of electricity. The information in this Energy Source Disclosure is based on GIS Certificates obtained and retired by the Supplier.</p> <p>2. Renewable Energy Standard (RES): is defined in the R.I. Gen Laws 39-26. The GIS certificates are retired by June 15th of the following year. This is calculated by multiplying the retired certificates for each power source by the renewable energy standard percentage of the product.</p> <p>3. Voluntary: GIS certificates of REC attributes in addition to the RES. The Voluntary REC attributes will be entirely from sources qualified as RI New sources (See R.I. Gen Laws 39-26) that are located only in New England. The GIS certificates can be retired by September 15th of the following year. This is calculated by multiplying the retired certificates for each power source by the voluntary RI New percentage of the product.</p> <p>4. Other Known Resources: Any other GIS certificates for electricity obtained by Supplier from specific generating units.</p> <p>5. Residual Mix: NextEra Energy Services Rhode Island may purchase electricity supply from system power contracts, not from specific generating units. System power is assigned attributes based on the mix of GIS certificates of sources found on the New England electricity grid that have not been obtained and retired by other entities, referred to as the 'Residual Mix'. The Residual Mix will largely be non-renewable, because most GIS certificates for renewable energy are obtained to meet the RI RES (and their equivalent in other New England states) or voluntary requirements. The total Residual Mix is reduced by the REC attributes retired based on the product chosen.</p> <p>6. Emissions for the product are calculated based on the emissions for the GIS Certificates the Supplier has obtained and retired. Average emissions for all power sources are calculated based on the System Mix from NEPOOL GIS, which include all GIS Certificates in the entire system. 100% is the average (baseline) emissions of the System Mix.</p> <p>7. See your contract terms and conditions for further information on this label. You may contact NextEra Energy Services toll free at 1-877-323-3049, the Rhode Island Office of Energy Resources at 1-401-574-9100 or the Rhode Island Department of Public Utilities at 1-401-941-4500.</p> <p>8. The effective price above applies to usage between May 2025 meter read dates and November 2025 meter read dates meter read dates for Residential and Commercial customers, and for August 2025 and November 2025 meter read dates for Industrial customers.</p> <p>9. NextEra Energy Services Rhode Island retires renewable energy certificates ("RECs") in addition to the RES Requirement as follows:</p> <p>Standard Product: RECs representing generation from RI New resources in an amount equal to 5% of usage.</p> <p>Opt-In Basic: None</p> <p>Opt-In 50 Green: RECs representing generation from RI New resources in an amount equal to 50% of usage.</p> <p>Opt-In 100 Green: RECs representing generation from RI New resources in an amount equal to 100% of usage..</p> |                                                                                  |     |    |                                                                               |        |
