

FOR RELEASE

Gexa Energy Solutions and Deco Lighting Partnering New Solution for Businesses to Update to Energy-Efficient LED Technology

HOUSTON, TEXAS (Mar. 29, 2016) – Gexa Energy Solutions, an energy services company and affiliate of [Gexa Energy, LP, a leading retail energy company](#), is teaming up with [Deco Lighting](#) to offer businesses a new service to update their facilities with energy-efficient LED technology. The program is designed to save customers money on their lighting costs and be easy to implement for retrofit applications and new construction.

By updating older lighting to LED, businesses can reduce their energy costs for lighting by up to 50 percent for indoor lighting and by up to 70 percent for outdoor lighting, according to a DECO Lighting analysis.

“A typical business spends 20-30% of the electricity bill on lighting according to the Department of Energy, and customers who select our program can reduce this expense by 50-70%” said Brian Landrum, president of Gexa Energy. “They also have the added benefit of being able to easily adjust LED lighting levels in the facility using Deco’s innovative design. Improved lighting levels offer additional safety, as well as create a more aesthetically-pleasing and comfortable work environment.”

Says Sam Sinai, CEO of Deco Lighting, “We’re thrilled to be working with a company that shares our vision for providing cost-effective, green energy solutions to forward-thinking customers who care about the environment. Gexa Energy Solutions and its affiliates have the largest portfolio of renewable energy products in the market and, combined with our state-of-the-art LED technology and ten-year warranty, ensure that we are working together to provide innovative energy solutions to customers.”

Normally, renewable energy and lighting efficiency projects are procured independently. Through our family of companies, Gexa Energy Solutions and its affiliates can offer customers a comprehensive energy plan that incorporates a portfolio of solutions including commodity, energy efficiency, water conservation, demand response, energy monitoring, solar, wind and battery storage. We recommend customers complete the LED Lighting retrofit first to reduce their total energy and capital required, and then move to incorporate green resources such as solar photovoltaics or wind.

Customers can get started with a free, no-obligation preliminary audit performed within as little as five days of the request. Gexa Energy Solutions will then present the audit results and review the financing options

with the customer. Typically, within 30 days of contract acceptance, Gexa Energy Solutions will initiate the project. Deco Lighting, an industry leader with 12,000 LED installations in both large and small companies, will provide a professional LED lighting solution design.

A key benefit from Deco Lighting is their 10-year limited warranty. "One of the reasons we partnered with Deco Lighting is that their 10-year limited warranty is twice that of others we have found on the market," said Landrum. "Members of our team have worked with them for years and have field tested their technology, which is designed and assembled in America, and we feel confident that they deliver an innovative and reliable LED lighting solution for customers."

Qualified companies can receive 10% of their installed LED fixtures free from Gexa Energy Solutions and Deco Lighting – up to a \$5,000 value. Competitive financing terms with zero percent financing options are available to qualified buyers. Learn more by viewing our [video](#).

About Gexa Energy Solutions, LLC

Gexa Energy Solutions, LLC is an energy services company ("ESCO") and affiliate of Gexa Energy, LP ("Gexa"), a leading retail energy provider. Gexa Energy Solutions and Gexa are subsidiaries of NextEra Energy, Inc. ("NextEra"), the largest generator in North America of renewable energy from the wind and sun. Gexa Energy Solutions provides energy expertise, operational excellence and innovative specialized solutions to meet the energy goals of its clients.
